

PRESS RELEASE

3GPP Message Analyser
Telecom Industry

For the Telecom Press

1st July 2011

Opening of new Internet Service for decoding and encoding 3GPP air interface messages

Innovative solution for Telecom Industry – decoding and encoding online service
“3GPP Message Analyser” supports all latest releases of 2G/GSM, 3G/UMTS, 4G/LTE
air interface messages.

Messages of earlier releases can be decoded for free, so anyone and at any time can use this
service without purchasing license.

This tool provides useful functionality to decode and encode the protocol stack messages
between mobile station and network defined by 3GPP standard. “It is easy to use, helps to
reduce errors in manual decoding and definitely saves your time” – users say.
